

WE INTEGRATED THE LOAD CELL STANDS INTO STEEL BASE PLATES WHICH SIT ON THE FOOTINGS.

Low Profile Portable TRUCK SCALE

Unitec continues its tradition of innovation and premier truck scale design with the **Portable Low Profile** model. A direct response to specific customer demand, this highly portable truck scale leaves one impression: quality.

Like our Low Profile Above Ground scale, its 12" profile minimizes ramping and height restrictions. We have integrated the load cell stands into steel base plates which sit on the footings. The steel deck is ideal for a portable truck scale deck – maximizing scale life and minimizing maintenance costs. The load cell and bumper bolt systems are identical to the permanent version of the same scale, making for a scale that is easy to service. This scale is currently being used in Road Construction, Heavy Construction and Asphalt production.

Low maintenance. Proven operating results. The Portable Low Profile Truck Scale.
